

GRP: **STOP** BURNING RR Ties! You're poisoning us!!

GRP broke its
promises to
Madison
County

- GRP promised a clean, quiet efficient energy plant
- GRP is burning toxic rail ties
- Storing, grinding, or piling chips outside allows chemicals to be released in to the air & water
- Workers processing the rail ties are not protected from the toxic chemicals released from the rail ties.
- GRP's soot containing toxic chemicals goes into our air
- There are no water runoff protections around GRP
- This surface water runoff from GRP is polluting our water
- The streams & ponds around GRP are discolored
- The noise from the facility operations is loud
- The noise from the steam discharge is shockingly loud
- The soot from GRP's smokestack is coating our fields, burning our eyes and making us sick.
